Ask our customers - Blair's superior quality, exceptional delivery performance and metallurgical expertise can add value to your existing business and provide cost effective solutions for new applications.

### NORTH AMERICA'S PREMIERE HEAVY GAUGE STRIP PRODUCER

Blair Strip Steel was founded in 1923 by George D. Blair. In the decades since, precision processing of heavy gauge cold rolled strip steel has remained our specialty. By staying focused on what we do best, we maintain state-of-the-art facilities that provide world class quality and reliable performance year after year.

Blair operates a single 155,000 square foot facility in New Castle, Pennsylvania.

Production facilities include three precision cold rolling tandem mills capable of rolling strip in thicknesses .040" thru .750" (1 mm - 19 mm) with precision tolerances in widths up to 21 1/2 inches (546 mm). Blair has both pure hydrogen and HNX gas batch annealing facilities. Coils up to 72" OD (1829 mm) can be finished to width utilizing our two slitters or to ordered lengths utilizing our 27" wide (686 mm) shear line.

**BLAIR STRIP STEEL IS  
ISO-9001 AND TS-16949 CERTIFIED  
THRU SRI QUALITY  
SYSTEM REGISTRAR**
